Frameworks & Libraries

- ReactJS, TailwindCSS, ExpressJS, NextJS, NodeJS

Tools

- Git & GitHub, Vim, Postman, VS Code

Skills

- Linux, Problem Solving, Web Development

PROJECTS

TextUtils - Convert your text in the way you want

- Developed a text utility application in which I have used React JS to make it.
- This app provides all operations related to text like Copying the text, Uppercase, Lowercase etc. and I had already deployed it on GitHub pages.

NewsMonkey - Get your daily news dose

- Built a news app which provides you realtime news related to your interest.
- I have used React JS to make it and News API for fetching the news. It will give you present news with date, time, author and all the features. There are different categories like business, sports etc.

iNotebook - Your notes are secured on the clouds

- This is a note utility app with all crud operations
- I have used whole MERN stack to make it. Making API with Express JS, Storing Data in MongoDB, Handling frontend with React JS.
- I have also implemented Login and Signup features but there are some bugs in them. Still it works properly.
